

For the Brick and Tile Industries

Advanced Materials

BRICKMAX®

Vibrantz is the leading supplier of engineered Mn_3O_4 , BRICKMAX. Our ability to access, evaluate, and manage the product from a variety of sources provides you with a consistent supply of quality product. BRICKMAX is available from sources in both the Northern and Southern Hemispheres. BRICKMAX is added to red clay and shale bodies to produce browns and darker shades, as a through-the-body brick colorant. It can be added to buff clays to produce a range of tans to grays.

The superfine particle size distribution of the product and high manganese content enhances the pigmentation factor when compared to other manganese products. BRICKMAX requires no hazardous classification and is the ideal product for those manufacturers wishing to slurry on-site for inclusion in ceramic bodies as a liquid.

Your Vibrantz representative is able to carefully assess your manufacturing needs and identify the most suitable product that meets your individual requirements. Vibrantz's team provides technical service support and on-hand assistance in plant trials to help improve your quality and performance.

BRICKMAX is available in bulk (via pneumatic delivery) and 2205 lb. (metric ton) supersacks.

Full analysis and MSDS are available upon request.

The information and recommendations contained herein are based on data we believe to be reliable and does not imply any warranty or performance guarantee, as conditions and methods of use of our products are beyond our control. The data herein is determined using Vibrantz's standard test methods. Hazard and safety information with respect to this product is available in the applicable SDS. Vibrantz will not be liable under any circumstance for consequential or incidental damages, including but not limited to, lost profits resulting from the use of our products.
