Pearls™

Sustainable, performance-enhancing tinting solution.

vibrantzpearls.com

The future of colorant tinting systems is here.

Increasingly stringent environmental regulations mean colorant companies are looking for more eco-friendly solutions that don't compromise overall paint performance. Pearls technology can also be used for gravimetric in-plant tinting.

Vibrantz's Pearls technology is the coatings industry's first and only **volumetrically dosed tinting system of solid colorants designed for use in water-based architectural and industrial paint applications**.

An accurate, low-maintenance dry tinting system that is easy to use, sustainable and saves money.

Several benefits rolled into one technology.

Sustainability

- Biocide-free
- 100% recyclable packaging
- Reduced waste
- Extended shelf life

Performance

- Highly soluble
- Superior tinting consistency
- Accurately dispensed
- Low impact on paint properties

Tinting system

- Overall cost savings
- Reduced maintenance
- Simple to service
- Improved cleanliness

Lifecycle analysis results show Pearls' potential to lower the global warming impact of tinting by 15% vs traditional liquid alternatives.
